

Source File: ~/2336/21/lab21.cpp
Input: under control of main function
Output: under control of main function
Value: 1

Write a recursive function template whose prototype is given by

```
1 template<typename T>
2 const T *linearSearch(const T *array, int n, T itemToFind);
```

The function performs a linear search of the range [array, array + n) for itemToFind. The function returns the smallest address i in the range [array, array + n) such that *i == itemToFind. The function returns nullptr if no such address exists. A main function for testing your function is shown in Figure 1. The expected output from executing this code is shown in Figure 2. To use the Makefile as distributed in class, add a target of lab21main to targets1srcfile.

```
1 #include <iostream>
2 #include <string>
3
4 using namespace std;
5
6 // function template prototype
7 template<typename T>
8 const T *linearSearch(const T *array, int n, T itemToFind);
9
10 #include "lab21.cpp"
11
12 template<typename T>
13 void printArray(const T *array, int count)
14 {
15     if (count > 0)
16     {
17         cout << *array << " ";
18         printArray(array + 1, count - 1);
19     }
20     else
21         cout << endl;
22 }
23
24 template<typename T>
25 void printAndSearch(const T *array, int n, T itemToFind, string nameOfArray)
26 {
27     const T *ptr;
28
29     cout << "Array " << nameOfArray << " contains:" << endl;
30     printArray(array, n);
31     ptr = linearSearch(array, n, itemToFind);
32     cout << itemToFind;
33     if (ptr)
34         cout << " is in array " << nameOfArray << " and is located at index "
35             << ptr - array << endl << endl;
36     else
37         cout << " is not in array " << nameOfArray << endl << endl;
38 }
39
```

Figure 1. /usr/local/2336/src/lab21main.C (Part 1 of 2)

```

40  int main()
41  {
42      const int aCount = 5, bCount = 7, cCount = 7, dCount = 12;
43      int a[aCount] = {5, 5, 5, 5, 5};
44      double b[bCount] = {7.7, 6.6, 5.5, 4.4, 3.3, 2.2, 1.1};
45      char c[cCount] = {'r', 'a', 'c', 'e', 'c', 'a', 'r'};
46      string d[dCount] = {"Cadillac", "Oldsmobile", "Chevrolet",
47                      "Toyota", "Lexus", "Dodge", "GMC", "BMW",
48                      "BMW", "GMC", "Dodge", "Lexus"};
49
50      printAndSearch(a, aCount, 5, "a");
51      printAndSearch(a, aCount, 2, "a");
52      printAndSearch(b, bCount, 1.1, "b");
53      printAndSearch(b, bCount, 11.11, "b");
54      printAndSearch(c, cCount, 'e', "c");
55      printAndSearch(c, cCount, 'E', "c");
56      printAndSearch(d, dCount, static_cast<string>("Lexus"), "d");
57      printAndSearch(d, dCount, static_cast<string>("Mercedes"), "d");
58
59      return 0;
60  }
